SUMMARY

B.Sc. Software Engineering graduate with strong Backend and Web development skills, including experience integrating AI. Skilled at leading small teams, turning ideas into solutions, tackling technical challenges, writing clean code, and collaborating effectively. Seeking a challenging role where I can contribute, guide others, and make a real impact.

PROJECTS

Real-Time Call Translation App

In the **Real-Time Call Translation App** project, I led a small team in developing a mobile application that translates calls in real-time between Hebrew, English, and Russian while preserving each speaker's voice. I designed the architecture, assigned tasks, and implemented a modular speech-to-speech pipeline using **Flutter, Python, Whisper (ASR), Google NMT, and Coqui xTTS**. This project demonstrates my ability to guide a team, tackle complex technical challenges, and integrate Backend, AI, and Mobile Development to deliver a stable, production-ready solution.

Recipe Website

In the Recipe Website project, I built a responsive web app using **React, TypeScript, Tailwind, CSS, and Node.js**. The site hosts 30+ recipes with search and category filters, delivering a smooth, mobile-first user experience. This project strengthened my front-end skills and demonstrated my ability to design intuitive, scalable web interfaces while applying UX best practices.

EDUCATION

Graduate B.Sc. in Software Engineering | Braude, Karmiel

Completed coursework in Data Structures, Algorithms, Object-Oriented Programming, Web and Cloud Development, Network Security, and Deep Learning.

TECHNICAL SKILLS

React · TypeScript · Tailwind · CSS · Node.js · Python · Flutter · Dart · REST/GraphQL · MySQL · MongoDB · Firebase/Supabase · Git · CI/CD · Agile Scrum
